CAMILA TEIXEIRA

Full Stack Developer | PHP/Laravel | Salesforce | Integrations

Belo Horizonte, Brazil | +55 (31) 98965-8128 | camila.teixeira42@hotmail.com | linkedin.com/in/acamilateixeira

PROFESSIONAL SUMMARY

Software developer with experience in financial systems, ERP, nationwide e-commerce, and enterprise applications for industrial, mining, and agribusiness environments. Work across requirements analysis, implementation, integration, testing, deployment, and production support, using PHP/Laravel, C#/.NET, Node.js, Python, JavaScript/TypeScript, React, Vue, Salesforce, and Oracle APEX. Experience with AWS at Grupo Mysa and Azure at Sicoob. Collaborative approach and ownership of delivery from planning through implementation and support.

TECHNICAL SKILLS

Backend & architecture: PHP/Laravel, C#/.NET, Node.js, Python, MVC, REST APIs, integrations, SOLID, legacy modernization.

Cloud & engineering: AWS, Microsoft Azure, Docker, Linux, Git, GitLab CI/CD, Jest, PHPUnit, automated testing, debugging, production support.

Frontend & data: React, Vue, TypeScript, JavaScript, HTML, CSS, SQL Server, MySQL, Oracle Database, SQL, PL/SQL, npm, Yarn, Composer, Artisan, Eloquent ORM, Figma.

Platforms: Salesforce (Apex, LWC, Aura, Visualforce, Triggers, Flows, SOQL/SOSL), Oracle APEX, Zeev BPMS, Fluig, TOTVS, PVI.

PROFESSIONAL EXPERIENCE

GRUPO MYSA | Full Stack Developer | Jun 2024 - Present

Develop enterprise software for Grupo Mysa, contributing to a nationwide e-commerce platform and ERP workflows used in commercial operations and branch management. Work across requirements analysis, implementation, testing, code review, deployment, and production support, collaborating with stakeholders to turn business needs and interface designs into working features.

Maintain and modernize PHP/Laravel applications by investigating defects, tracing business rules, and improving existing services. Build REST APIs and integrations connecting ERP, Salesforce, e-commerce, and internal systems, handling data synchronization, validation, integration failures, and inconsistent records. Develop frontend features with React, Vue, JavaScript, and TypeScript, using npm and Yarn; use Composer, Artisan, and Eloquent ORM in Laravel development.

Implement Salesforce Lightning Web Components and business automation with Apex, Triggers, and Flows, alongside Aura, Visualforce, and SOQL/SOSL. Investigate production incidents across application and integration boundaries, deliver corrective and evolutionary changes, and participate in releases in an AWS environment. These contributions support the continued operation and evolution of connected enterprise systems and customer-facing commerce workflows.

EASY PROCESS EHS-S / TRIADD | Software Engineer | Oct 2024 - May 2025

Developed and maintained enterprise applications with Oracle APEX and Oracle Database for industrial operations, mining, and agribusiness. Contributed to solutions used by Albras, Raízen, Tereos, FS Bioenergia, Keune, and Vale, supporting auditing, operational management, risk analysis, and data collection. Translated operational requirements into application features and database logic within existing enterprise systems.

Implemented data-entry forms, field validations, business rules, stored procedures, and database triggers with PL/SQL. Wrote SQL and PL/SQL queries for application functionality, operational reports, and document generation, connecting collected information to the processes followed by business users. Developed and maintained REST API integrations so applications could exchange information with other enterprise systems.

Investigated incidents in existing applications, traced issues through database queries and business logic, and delivered corrective maintenance and functional enhancements. Worked with Git to manage code changes while evolving Oracle APEX applications and their database components. The work made operational information available through structured forms, reports, documents, and integrations, supporting the daily execution of audit and management workflows across different client environments.

ZR SYSTEM | PHP Developer | Jun 2024 - Sep 2024

Developed and enhanced a legacy PHP application used to automate operational processes, working within an established Model-View-Controller (MVC) architecture. Focused on extending the existing system through application features and business rules, connecting the needs of operational workflows to changes in the codebase rather than replacing the application or introducing an unrelated architecture.

Implemented functionality across the existing MVC structure, working with application logic and MySQL persistence. Wrote and maintained SQL queries used by application features, connected business rules to stored data, and adapted existing functionality to the processes being automated. The role required understanding how the legacy codebase organized its responsibilities so that new changes could fit the application structure and existing workflows.

Used Git to version development and maintenance changes, keeping modifications within the established project structure. Contributed to the continued evolution of the operational system through hands-on PHP development, MVC-based implementation, MySQL data handling, and SQL queries. The resulting features expanded the processes supported by the application and allowed operational requirements to be addressed within the existing software, preserving continuity for the workflows already handled by the system.

SICOOB CENTRAL CECREMGE | Full Stack Developer | Jun 2021 - Jun 2024

Developed and supported enterprise applications for financial cooperatives at Sicoob Central Cecremge, contributing to backend services, web interfaces, integrations, and production maintenance. Built PHP/Laravel REST APIs connecting web applications and internal services, using Composer, Artisan, and Eloquent ORM. Implemented React/TypeScript and Vue interfaces and worked with C#/.NET, Node.js, and Python in enterprise solutions.

Worked in a Microsoft Azure environment with SQL Server and MySQL, writing queries and maintaining application data access and business functionality. Modernized legacy PHP/Laravel and JavaScript systems through refactoring, corrective maintenance, and functional enhancements. Investigated production incidents, traced defects through existing code and integrations, and delivered hotfixes for issues affecting business applications.

Applied SOLID principles and automated unit testing with Jest and PHPUnit to support maintainable application changes. Used GitLab CI/CD, Docker, and Linux in delivery and production support, alongside Zeev BPMS in the enterprise environment. Contributed across implementation, testing, deployment, and incident resolution, supporting the continued operation of financial systems while evolving their interfaces, APIs, and integration capabilities.

CONSTRUTORA VOCÊ | Systems Analyst | Mar 2018 - Dec 2020

Supported Salesforce CRM implementation and adoption for real estate commercial operations at Construtora Você, connecting system functionality to the workflows followed by sales and operational teams. Gathered user requirements, documented business processes, and contributed to commercial workflow improvements so employees could incorporate the CRM into their daily activities and handle operational information within the system.

Provided user support and training, explained application functionality, and helped resolve system issues reported by employees. Worked with business teams to understand practical process needs and translate day-to-day difficulties into documented requirements and workflow improvements. This combined systems analysis, process documentation, and direct support for employees using the commercial applications.

Reviewed and validated financial information and documentation associated with mortgage credit processes, coordinating with commercial and operational teams involved in those workflows. Used Salesforce CRM, Fluig, TOTVS, and PVI in the business environment. The role supported the consolidation of CRM processes, the adoption of enterprise tools by users, and the handling of documentation required for mortgage credit operations, bringing together application support, business process analysis, employee training, and financial data validation.

EDUCATION

Unibta - Technologist Degree in Systems Analysis and Development | 2021 - 2023

Estácio - Technologist Degree in Business Process Management | 2024 - 2025

Bachelor’s Degree in Computer Science - in progress

ADDITIONAL EDUCATION

Modern Software Engineering - UFMG | Salesforce Admin / App Builder Learning Track

LANGUAGES

Portuguese: Native | English: Advanced | French: Basic
