Summary

Back-end and full stack developer with 5 years in financial systems, ERP, nationwide e-commerce, and applications for industry and mining. I work from requirements to production: REST APIs in PHP/Laravel and Node.js, integrations between ERP, Salesforce, and e-commerce, React, Vue, and TypeScript interfaces, legacy modernization, and production support. I prioritize data consistency, automated tests, and documented technical decisions.

Technical skills

Back end: PHP 8, Laravel (Eloquent, queues, Sanctum), Node.js, REST APIs, messaging (RabbitMQ), SOLID and design patterns, C#/.NET, Python
Data: MySQL, SQL Server, PostgreSQL, Oracle and PL/SQL, Redis (cache, locks, queues), data modeling and query optimization
Engineering: Automated testing (PHPUnit, Pest, Jest, node:test), CI/CD (GitHub Actions, GitLab CI), Docker, Linux, AWS, Azure, Git
Front end, mobile & platforms: TypeScript, React, React Native (Expo), Vue 3, Supabase (Auth, Realtime, Vault), Salesforce (Apex, LWC, Triggers, Flows, SOQL), Oracle APEX

Professional experience

Grupo Mysa — Full Stack Developer

Jun 2024 – Present · ERP · Nationwide e-commerce · Integrations

- Maintain and evolve the integrations between ERP, Salesforce, and the nationwide e-commerce platform, handling data synchronization, validation, and failures across systems that support commercial operations and branches.
- Modernize legacy PHP/Laravel services: trace production incidents to root cause across application boundaries, refactor business rules, and ship fixes without disrupting operations.
- Work across the full cycle with product and business teams: requirements analysis, implementation, code review, AWS releases, and production support.
- Build Salesforce automations and components (Apex, LWC, Triggers, Flows) and React and Vue interfaces with TypeScript.

Easy Process EHS-S / Triadd — Software Engineer

Oct 2024 – May 2025 · Industry · Mining · Agribusiness

- Built applications used by Vale, Raízen, Albras, Tereos, FS Bioenergia, and Keune for auditing, operational management, risk analysis, and data collection.
- Modeled business rules in the database with PL/SQL (procedures, triggers, validations) and wrote queries for operational reports and documents.
- Integrated the applications with other enterprise systems through REST APIs and resolved incidents across different client environments.

ZR System — PHP Developer

Jun 2024 – Sep 2024 · Legacy · MVC · Automation

- Extended a legacy PHP application for operational process automation, adding features within the existing MVC architecture without breaking workflows already in use.
- Maintained the MySQL queries and business rules connecting the automated processes to their data.

Sicoob Central Cecremge — Full Stack Developer
Jun 2021 – Jun 2024 · Financial systems · Credit unions

- Built Laravel REST APIs for the credit unions' systems, integrating web applications and internal services in an Azure environment with SQL Server and MySQL.
- Modernized legacy PHP and JavaScript systems through SOLID-driven refactoring and automated tests (PHPUnit, Jest).
- Supported financial systems in production: incident investigation, hotfixes, and delivery with GitLab CI/CD, Docker, and Linux.
- Built React/TypeScript and Vue interfaces and contributed to C#/.NET, Node.js, and Python solutions.

Construtora Você — Systems Analyst
Mar 2018 – Dec 2020 · Salesforce CRM · Commercial processes

- Led Salesforce CRM adoption across sales teams: gathering requirements with users, documenting processes, and running training.
- Turned day-to-day operational problems into documented requirements and workflow improvements, and validated financial data for mortgage credit processes.

Internship at Caixa Econômica Federal (Nov 2016 – Nov 2017).

Projects

TripFlow — Corporate travel API: requests, approval within the cost center budget, booking, and events for downstream systems. (github.com/acamilateixeira/tripflow)
Laravel 12 · MySQL · Redis · RabbitMQ · Docker · GitHub Actions

- Transactional outbox + RabbitMQ with publisher confirms, backoff, and DLQ
- Pessimistic lock on budget and Redis distributed lock for bookings
- Idempotency-Key, multi-tenant isolation, and end-to-end correlation ID
- Pest (architecture, feature, integration), Larastan level 8, ADRs
- CI/CD with AI pull-request review and image published to GHCR

Bora — Ride management app used by the city of Conceição do Mato Dentro, Brazil, in a temporary operation. Riders request, dispatch approves and assigns, and drivers complete the trip, all updated in real time.
(github.com/acamilateixeira/Bora)
React Native · Expo · TypeScript · Supabase (Postgres, RLS, Realtime, Edge Functions)

- Multi-tenant by organization with Postgres RLS and security definer functions
- Real-time updates with Supabase Realtime and live driver location on the map
- Push via a Deno Edge Function, authorized by a secret stored in Vault
- Driver availability with history and automatic expiry in the database
- Cross-tenant RLS tests on Postgres, unit tests, and CI

Education

- Technologist degree in Systems Analysis and Development — Unibta (2021–2023)
- Technologist degree in Business Process Management — Estácio (2024–2025)
- Computer Science — degree in progress
- Additional: Modern Software Engineering (UFMG) · Salesforce Admin / App Builder track
